

DAY 4

Conditional Functions

Conditional functions decision lene me madad karte hain: agar condition sahi hai to ek result, warna doosra. IF family Excel ke sabse important functions me se hai.

IF Function

- Syntax: =IF(logical_test, value_if_true, value_if_false)
- Comparison operators: =, >, <, >=, <=, <> (not equal).
- Text result ko double quotes me likhte hain, jaise "Pass".

Logical Functions

- AND: sabhi conditions true hone chahiye. OR: koi ek condition true kaafi hai. NOT: result ulta karta hai.
- Nested IF: ek IF ke andar doosra IF (multiple grades ya categories ke liye).
- IFS: nested IF ka aasan tareeka (Excel 2019 aur upar).

Error Handling

- IFERROR: error (#N/A, #DIV/0!) ki jagah apna message ya khaali value dikhata hai.
- ISBLANK, ISNUMBER, ISTEXT: cell ki type ya khaali hone ki jaanch.

Important Formulas / Shortcuts

Formula / Shortcut	Kaam (Purpose)
=IF(B2>=40, "Pass", "Fail")	Pass ya Fail
=IF(AND(B2>=40, C2>=40), "Pass", "Fail")	Dono subject me pass hona zaroori
=IF(OR(B2>90, C2>90), "Star", "-")	Koi ek me 90 se zyada
=IF(B2>=80, "A", IF(B2>=60, "B", "C"))	Nested IF grading
=IFS(B2>=80, "A", B2>=60, "B", TRUE, "C")	IFS se grading
=IFERROR(B2/C2, 0)	Error aane par 0
=IF(ISBLANK(A2), "Missing", A2)	Khaali cell check

Practice Tasks

1. Marks ke basis par Pass/Fail column banao (pass marks 40).
2. Grade nikalo: 80+ = A, 60-79 = B, 40-59 = C, baaki Fail.
3. AND use karke bonus do: sales 50000 se zyada aur rating 4 se zyada.
4. Division formula me IFERROR lagao aur #DIV/0! hatao.

Pro Tip: Nested IF me har condition ko sabse bade se chhote (ya chhote se bade) order me rakho, warna galat result aayega.
