

DAY 5

Conditional Calculation

Aaj hum seekhenge ki kisi condition ke basis par count, sum aur average kaise nikalte hain. Reports banane ke liye yeh functions bahut kaam aate hain.

Single Condition Functions

- COUNTIF(range, criteria): condition puri karne wali cells count karta hai.
- SUMIF(range, criteria, sum_range): condition ke basis par sum.
- AVERAGEIF(range, criteria, average_range): condition ke basis par average.

Multiple Condition Functions

- COUNTIFS, SUMIFS, AVERAGEIFS: ek se zyada conditions ek saath.
- MAXIFS aur MINIFS: condition ke saath sabse badi ya sabse chhoti value.
- Dhyan rakho: SUMIFS me sum_range sabse pehle aati hai, SUMIF me sabse aakhir me.

Criteria Likhne Ke Tareeke

- Text: "Delhi". Number: 100. Operator ke saath: ">50", "<=100", "<>0".
- Wildcards: * (kuch bhi characters) aur ? (ek character). Jaise "A*" A se shuru hone wale text.
- Cell ke saath operator: ">"&E1 (E1 me jo value hai usse bada).

Important Formulas / Shortcuts

Formula / Shortcut	Kaam (Purpose)
=COUNTIF(B2:B20, "Delhi")	Delhi kitni baar aaya
=COUNTIF(C2:C20, ">50")	50 se bade values ki ginti
=SUMIF(B2:B20, "Delhi", C2:C20)	Delhi ki total sales
=AVERAGEIF(B2:B20, "Delhi", C2:C20)	Delhi ki average sales
=COUNTIFS(B2:B20, "Delhi", D2:D20, "Laptop")	Delhi aur Laptop dono
=SUMIFS(C2:C20, B2:B20, "Delhi", D2:D20, "Laptop")	Delhi + Laptop ki sales
=MAXIFS(C2:C20, B2:B20, "Delhi")	Delhi ki sabse badi sale
=COUNTIF(A2:A20, "A*")	A se shuru hone wale naam

Practice Tasks

1. City-wise total sales SUMIF se nikalo.
2. Kisi product ki kitni sales 10000 se zyada hui, COUNTIF se pata karo.
3. SUMIFS se region aur product dono ke basis par sales nikalo.
4. AVERAGEIFS se kisi ek month ka average nikalo.

Pro Tip: Range ki size sabhi ranges me barabar honi chahiye, warna #VALUE! error aata hai.
