

DAY 7

Text Functions

Text functions naam, codes aur addresses jaise text data ko todne, jodne aur saaf karne me kaam aate hain.

Text Extract Karna

- LEFT(text, n): shuru se n characters. RIGHT(text, n): end se n characters.
- MID(text, start, n): beech se n characters, start position se.
- LEN(text): total characters (spaces samet).

Text Saaf Karna aur Case Badalna

- TRIM: extra spaces hatata hai (beech me sirf ek space rakhta hai).
- UPPER, LOWER, PROPER: BADA, chhota aur Pehla Akshar Bada.

Text Jodna

- & operator: text ko jodta hai. CONCATENATE aur CONCAT bhi wahi kaam karte hain.
- TEXTJOIN(delimiter, ignore_empty, range): delimiter ke saath kai cells jodta hai.

Important Formulas / Shortcuts

Formula / Shortcut	Kaam (Purpose)
=LEFT(A2, 3)	Pehle 3 characters
=RIGHT(A2, 4)	Aakhri 4 characters
=MID(A2, 4, 2)	4th position se 2 characters
=LEN(A2)	Characters ki ginti
=TRIM(A2)	Extra spaces hatao
=UPPER(A2)	SAB BADE AKSHAR
=PROPER(A2)	Har Word Ka Pehla Akshar Bada
=A2&" "&B2	First name + Last name
=CONCAT(A2, "-", B2)	Do cells jodo
=TEXTJOIN(", ", TRUE, A2:D2)	Comma se jodo, blank chhodo

Practice Tasks

1. Full name se first name aur last name alag columns me nikalo.
2. Ek email ID ke pehle 5 characters LEFT se nikalo.
3. Ganda data (extra spaces, alag alag case) TRIM aur PROPER se saaf karo.
4. Naam aur city ko TEXTJOIN se ek cell me jodo.

Pro Tip: Formula ka result agar sirf value me chahiye to Copy > Paste Special > Values karo, warna original cells hatane par result bhi gayab ho jayega.
