

DAY 8

More Text Functions

Aaj hum text ke advanced functions seekhte hain: text dhundhna, badalna, format karna aur ek cell ko todna.

Text Dhundhna aur Badalna

- **FIND**: text ki position batata hai (case-sensitive). **SEARCH**: same, lekin case-insensitive aur wildcards allow.
- **SUBSTITUTE**(text, old, new): text me kuch words ko badalta hai.
- **REPLACE**(text, start, n, new): position ke hisaab se badalta hai.

Format aur Conversion

- **TEXT**(value, format): number ya date ko custom text format me badalta hai.
- **VALUE**: text jaisa dikhne wale number ko asli number banata hai.
- **REPT**: text ko bar bar repeat karta hai (jaise star rating). **EXACT**: do texts barabar hain ya nahi.
- **CLEAN**: non-printing characters hatata hai.

Text Todne ke Tareeke

- **Text to Columns** (Data tab): delimiter (comma, space) ke basis par cell ko columns me todta hai.
- **Flash Fill** (Ctrl + E): ek-do example dikhao, Excel pattern samajh kar baaki fill kar deta hai.
- **TEXTSPLIT** (naye Excel me): formula se text todna.
- **LEFT + FIND** combo: kisi character (jaise @ ya space) se pehle ka text nikalna.

Important Formulas / Shortcuts

Formula / Shortcut	Kaam (Purpose)
=FIND ("@" , A2)	@ ki position
=SEARCH ("data", A2)	Case-insensitive search
=SUBSTITUTE (A2, "- ", "")	Sabhi dash hatao
=REPLACE (A2, 1, 3, "XYZ")	Pehle 3 chars badlo
=TEXT (A2, "dd - mmm - yyyy")	Date ko 05-Jan-2026 format me
=VALUE (A2)	Text ko number banao
=REPT ("*", 4)	****
=EXACT (A2, B2)	TRUE ya FALSE
=LEFT (A2, FIND ("@" , A2) - 1)	Email ka username
=TEXTSPLIT (A2, ",",)	Comma par todo
Ctrl + E	Flash Fill

Practice Tasks

1. Email list se username aur domain alag karo (LEFT/MID + FIND).
2. Phone numbers me se dash aur spaces SUBSTITUTE se hatao.
3. Date ko TEXT function se "Monday" (day name) me badlo.
4. Text to Columns aur Flash Fill dono se full name ko todo aur fark dekho.

Pro Tip: Agar FIND #VALUE! error de raha hai to iska matlab hai wo text cell me hai hi nahi. IFERROR se handle karo.
