

DAY 10

Pivot Tables

Pivot Table Excel ka sabse powerful tool hai jisse hazaaron rows ka data seconds me summary report me badal jata hai, bina koi formula likhe.

Pivot Table Banane se Pehle

- Data me har column ka header hona chahiye, koi blank row/column nahi, aur merged cells nahi.
- Data ko Table (Ctrl + T) bana lo taaki naya data aane par pivot easily update ho.

Pivot Table Banana

- Data me click karo > Insert > PivotTable > OK (New Worksheet).
- Field list me 4 areas hote hain: Filters, Columns, Rows aur Values.
- Text fields (Region, Product) Rows me aur number fields (Sales) Values me daalo.

Value Field Settings

- Values me Sum, Count, Average, Max, Min me se function chun sakte ho.
- Number Format se currency ya comma style lagao.
- Filters area se poore report ko kisi ek category par filter karo.

Zaroori Baatein

- Data badalne par pivot par Right Click > Refresh (Alt + F5) karo.
- Grouping: dates ko Months/Quarters/Years me ya numbers ko ranges me group karo.
- Design tab se layout aur style badlo (Compact, Tabular).

Important Formulas / Shortcuts

Formula / Shortcut	Kaam (Purpose)
Alt + N + V	PivotTable insert
Alt + F5	Refresh
Ctrl + Alt + F5	Sabhi pivots refresh
Right Click > Group	Dates ya numbers group
Double click on value	Us value ka detail data (Drill down)

Practice Tasks

1. Sales data se Region-wise total sales ka pivot banao.
2. Rows me Product, Columns me Region aur Values me Sales rakhkar cross-table banao.
3. Sales ko Sum ki jagah Average me badlo.
4. Date field ko Month aur Year me group karo.

Pro Tip: Pivot me galat jagah field chali jaye to use field list se bahar drag karke hata do. Kuch bigadta nahi.
