

DAY 13

Dashboard

Dashboard ek single page report hota hai jisme KPIs, charts aur slicers ek saath dikhte hain taaki management jaldi decision le sake. Aaj hum poora dashboard banane ka process seekhte hain.

Dashboard Ki Planning

- Pehle decide karo: dashboard kiske liye hai aur kaunse sawal ka jawab dena hai.
- 3 se 5 important KPIs chuno (jaise Total Sales, Total Profit, Orders, Average Order Value).
- Layout sketch karo: upar KPI cards, beech me charts, side me slicers.

Dashboard Banane ke Steps

- Step 1: Data ko clean karo aur Table (Ctrl + T) banao.
- Step 2: Alag sheet me sabhi pivot tables banao (calculations sheet).
- Step 3: Har pivot se PivotChart banao.
- Step 4: Nayi sheet 'Dashboard' banao aur charts wahan cut/paste karo.
- Step 5: KPI cards banao (shapes/text boxes ko cell se link karo).
- Step 6: Slicers add karo aur Report Connections se sabhi pivots se jodo.

Formatting aur Finishing

- Gridlines hatao (View > Gridlines uncheck). Ek consistent color theme rakho.
- Charts ko align karo (Shape Format > Align). Titles clear rakho.
- Sheets ke naam meaningful rakho (Data, Pivots, Dashboard).
- Calculations wali sheet chhupa do ya sheet ko Protect karo taaki koi galti se na badle.

Important Formulas / Shortcuts

Formula / Shortcut	Kaam (Purpose)
<code>=SUM(SalesData[Amount])</code>	Total Sales KPI
<code>=SUM(SalesData[Profit])</code>	Total Profit KPI
<code>=COUNTA(SalesData[OrderID])</code>	Total Orders KPI
<code>=AVERAGE(SalesData[Amount])</code>	Average Order Value
Text box > Formula bar me <code>=Sheet!A1</code>	Shape ko cell se link karo
View > Gridlines (untick)	Dashboard saaf dikhe

Practice Tasks

1. Sales data se 4 KPIs (Sales, Profit, Orders, Avg Order) banao.
2. 3 pivot charts banao: Month-wise trend, Product-wise sales, Region-wise share.
3. Region aur Category ke 2 slicers lagao jo sabhi charts ko control kare.
4. Dashboard sheet ko clean look do aur data sheets ko chhupa do.

Pro Tip: Dashboard me kam se kam cheezein rakho. Zyada charts dalne se message dhundhla ho jata hai.
